SUMMARY

Computer Science and Design student seeking a **Full-Stack Developer** role, with hands-on experience building and deploying web applications using MongoDB, Express.js, React.js, and Node.js. Skilled in designing RESTful APIs, implementing authentication and role-based access control (RBAC), and applying security best practices (rate limiting, input sanitization, XSS protection). Experienced in version control (Git/GitHub) and writing clean, maintainable code, with proven results including a full-stack e-commerce platform featuring 20+ REST API endpoints and a 40% reduction in manual order-processing time.

EDUCATION

Atria Institute of Technology

2023 – 2027

Bachelor of Engineering in Computer Science and Design

CGPA: 7.69/10

Bengaluru, Karnataka

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, Python, SQL

Web Development: React.js, HTML, CSS, Node.js, Express.js

Databases: MySQL, MongoDB

Tools & Practices: Git, GitHub, GitHub Actions, RESTful API Design

Core Subjects: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems

PROJECTS

NM Store – Full-Stack E-Commerce Website

2026

Node.js, Express.js, MongoDB, Mongoose, JavaScript, HTML/CSS

- Built a full-stack e-commerce web application supporting **50+** products across **8+** categories, with separate customer and admin dashboards.
- Implemented product search/filtering, cart & checkout, coupon codes, and order tracking, reducing checkout steps by **30%**.
- Built an admin panel with a real-time sales dashboard, cutting manual order-processing time by **40%**.
- Designed and integrated **20+** RESTful API endpoints (MVC architecture) for authentication, products, cart, orders, and reviews.
- Implemented role-based access control (RBAC) across **10+** protected routes; applied rate limiting, input sanitization, and XSS protection.

Simon Says Game

2026

HTML5, CSS3, JavaScript (DOM manipulation, event handling)

- Developed a browser-based memory game with **3** difficulty levels using vanilla JavaScript, with dynamic game logic and random sequence generation.
- Designed interactive UI components with real-time, event-driven feedback using JavaScript DOM manipulation across **15+** UI elements.
- Implemented level progression, input validation, and game-over detection, reducing input-handling latency to under **50ms**.
- Built a responsive, cross-browser interface with CSS3, tested across **5+** screen sizes.

Fake News Classifier

2025

Python, Flask, scikit-learn, NLTK, TF-IDF, Heroku

- Developed a full-stack NLP application to detect fake news, training a model on **20K+** labeled articles with **94%** classification accuracy.
- Performed text preprocessing (tokenization, stopword removal, stemming) and TF-IDF feature extraction across **5,000+** features.
- Trained and serialized a scikit-learn model, exposing predictions via a Flask REST API with sub-**1s** response time.
- Deployed the application on Heroku for public access, using Git/GitHub for version control.

ACHIEVEMENTS

- Solved **100+** Data Structures and Algorithms problems on LeetCode, demonstrating strong analytical and problem-solving skills.
- [Data Structures and Algorithms Certificate](#)
- [PHP and MySQL Certificate](#)
